

ABSTRACT

The invention relates to a self-closing diaphragm valve (V) with a slit diaphragm (1) and a dome-like securing part (2) associated with a mounting region (6) of the diaphragm (1), and proposes, for the purpose of achieving a diaphragm valve which can be pre-assembled ready for use, that the securing part (2) is connected in a positively locking or integral manner to the diaphragm (1) and is formed in order to be secured in a closure part (7) by latching or over-engagement on the outer periphery of the circumference.
